

STEPHEN J. WHITE

EXPERIENCE

Primary software developer of an enterprise-level business process management solution used by several national and international organizations, including multiple Fortune 500 companies, healthcare systems, government contractors, financial firms, and professional sports franchises.

Software architecture/design and engineering, requirements gathering and technical writing, including generation of formal specification documents and project estimates.

Technical advisement and facilitation of the purchase and transition of a large software solution from an external firm. Responsible for analysis and engineering related to the adoption and integration of a significant codebase written by external resources into a managed software solution.

Managed a small software development team (of 5-10 members), including the facilitation of code reviews, status meetings, and the management of overseas development staff.

Responsible for training new team members and assisting coworkers with specific problems or questions as necessary, including instruction on new technologies and processes.

SKILLS

C# and VB.NET, primarily via ASP.NET web applications (both ASP.NET Web Forms and ASP.NET MVC/WebAPI).

Microsoft SQL Server, and other RDBMS systems. Database design and architecture, SQL query design, analysis and profiling. Programmatic access to data via ADO.NET, Entity Framework, and Dapper.

HTML, SVG, JavaScript, and CSS, including jQuery and Bootstrap. Experience with TypeScript, LESS, etc. Some experience with AngularJS and other SPA frameworks.

Experience with various other languages, including Classic ASP, VBScript, PHP, Java and C++.

Experience with unit testing and Test Driven Development (TDD) methodologies.
